

PRODUCT OVERVIEW · 2026

Compact Hydraulic Power Units

for Vehicle & Workshop Lifting Equipment

Compact AC power units for vehicle lifts — lift / lower circuit, emergency lowering and pressure relief, matched to your lift parameters.

WHAT WE COVER

AC / DC Power Units

Standard & Customized Circuits

Custom Tank · Valve · Motor Configuration

OEM / Private Label

KEY PARAMETER RANGES

Built around your parameters

Tell us your equipment data — we configure the unit to match.

Motor voltage

AC 230 / 400 V 3-phase, 50 Hz (110 / 220 V single-phase available)
DC 12 / 24 / 48 V

Motor power

AC 0.75 – 2.2 kW · DC 0.8 – 3.0 kW

Pump displacement

Gear pumps 0.16 – 5.8 cc/rev

Working pressure

Up to 250 bar (typical 100 – 200 bar)

Tank volume

1.7 – 30 L · steel or plastic

Valve / circuit options

Lift · hold · lower, solenoid or manual release, pressure-compensated lowering, relief & directional valves — or your own circuit

Duty cycle

S1 continuous (AC) · S3 intermittent (DC)

Mounting / dimensions

Horizontal or vertical; flange, bracket and envelope adapted to your installation space

Ranges show typical supply. Other voltages and ratings on request — the final configuration is always matched to your equipment.

Two application fields, one engineering approach

Power units configured for the lifting and handling equipment we actively develop for.

01

Vehicle & Workshop Lifting

230 / 400 V AC · lift / lower circuit ·
emergency lowering · pressure relief · tank
options · compact installation

Car Lift

2-post and 4-post vehicle lifts

Scissor Lift

Scissor lifts and workshop lifting tables

02

Material Handling Equipment

12 / 24 / 48 V DC · intermittent duty ·
compact mounting · lift / lower · stacking ·
fork adjustment · application-specific
configuration

Stacker

Lift, lower and stacking circuits

Electric Forklift

Lift, lower and fork adjustment

Special Handling Equipment

Pallet trucks and custom handling machines

Technical matching to your equipment

Send us what you have — a drawing, an existing unit, a circuit, or just the key numbers. We take it from there.

YOU SEND US

Drawing

Equipment or installation drawing

Existing power unit specification

The unit you use today

Hydraulic circuit

Your schematic or function list

— or simply —

Pressure

Flow

Voltage

Duty cycle

Space

TECHNICAL MATCHING

01

Requirement review

Load, speed, duty cycle and space

02

Configuration proposal

Motor, pump, valves, circuit and tank

03

Drawing & prototype

Installation drawing and sample unit

04

Validation & series supply

Approved sample becomes your standard

YOU RECEIVE

A unit matched to your machine

Tank & mounting for your space

Your brand: logo, colour, nameplate, packaging

Consistent series supply

Not a standard model sold as-is — a power unit engineered around your equipment.
